

Senayan City and UOB Indonesia hold free COVID-19 vaccinations in support of the government's efforts to build a healthy Indonesia

Jakarta, 16 June 2021 – Senayan City and UOB Indonesia today launched a free vaccination programme for people to receive their first dose of AstraZeneca to help curb the spread of COVID-19. The vaccine drive will run from 16 to 19 June 2021 at THE HALL area, 8th Floor, Senayan City Mall. The programme is part of the joint efforts between Senayan City and UOB Indonesia to support the government's efforts to build a healthy Indonesia.

Mrs Halina, Director of Leasing and Marketing Communication, Senayan City said, "Senayan City is taking part in helping with the distribution of the COVID-19 AstraZeneca vaccine, a priority by DKI Jakarta's government. Through this contribution, along with UOB Indonesia's collaboration, we hope to support the National Vaccination Programme for DKI Jakarta and non- DKI Jakarta residents domiciled in Jakarta, as stated in the Circular of the Ministry of Health: SR.02.04/II/1496/2021. Open to public, our programme has a vision to support the government towards a healthy and COVID-19-free Indonesia.

Mrs Ani Pangestu, Executive Director of Human Resources, UOB Indonesia, said, "To help more people gain access to COVID-19 vaccinations faster, we are pleased to work with like-minded partners such as Senayan City Mall to create a vaccination centre for the public. Over the four days from 16 to 19 June, the community can access the vaccination for free and protect themselves from the worst of the virus. We are also encouraging our own people to take part in this vaccination drive. We believe that positive synergy between the government and the private sector to slow down the spread of the virus through vaccinations is essential to saving lives, improving health and helping on the road to economic recovery and longer-term prosperity."

Based on the data from the Indonesian Ministry of Health¹, more than one billion doses of AstraZeneca's vaccine have been distributed globally. The World Health Organisation has found that the AstraZeneca vaccine is safe and is effective at protecting people from serious risk of COVID-19². Upon receiving the vaccine, people must continue to adhere to the health protocols including wearing masks, washing hands with soap and water, safe distancing, avoiding crowds and limiting mobility.
